

## AMENDMENT

### ARTP Handbook in Spirometry (Second Edition)

Please note the following amendments to page 69:

In the final paragraph the equation should read:

**FVC > 6**

*The correct paragraph is detailed below:*

Abnormalities may show up on the volume/time spirogram which can help with the interpretation of the results, e.g. time to expire FVC > 6 seconds may denote an obstructive defect; time to expire < 2 seconds may denote a restrictive defect.

Please accept our apologies,

Thank you.
